

C60-80

FORKLIFT TRUCK WITH DIESEL OR LPG DRIVE

C60D | C70D | C80D | C80D900

C60L | C70L | C75L

POWERFUL
INDUSTRIAL ENGINES

SPACIOUS, COMFORTABLE
AND WITH INDIVIDUAL
EQUIPMENT OPTIONS

IDEAL USE IN TIGHT SPACES
THANKS TO SMALL WORKING
WIDTHS

With pneumatic or SE tyres

Load-bearing capacity:
6,000 / 7,000 / 7,500 / 8,000 kg

FORKLIFT TRUCK WITH DIESEL OR LPG DRIVE **C60-80D900 / C60-75L**

**Maximum productivity, ergonomics
and reliability combined with
low operating costs.**

Developed for intensive heavy-duty applications.
Low procurement costs without comprising on
performance.

HIGHLIGHTS

1

STURDY CHASSIS “BUILT TO LAST” DESIGN

Designed according to the “Built to last” concept, a sturdy and functional design with high-quality components is guaranteed. From the fully welded frame through the sturdy steering axle to the robust upright rails with a solid 8-roller fork carrier with four supporting rollers at the side.

2

LOW MAINTENANCE COSTS

Thanks to fault codes, simple on-board diagnosis is possible without expensive service tools being necessary. The hinged cover can simply be opened during maintenance work and the service technician thus has fast and comfortable access to all maintenance and wear parts.

3

SAFE LOAD HANDLING EVEN WITH HEAVY LOADS

The sturdy upright rails have solid 8-roller fork carriers with four supporting rollers at the side in order to be able to transport even off-centre loads reliably. The low-noise lifting hydraulics ensure gentle and quiet load handling of up to 8 tonnes with a load centre at 600 mm or 900 mm.

4

ERGONOMIC AND SAFE ENTRY AND EXIT

Drivers can reach their ergonomic workplace comfortably and safely thanks to two low, non-slip foot steps. The footwell is generously sized so that drivers have enough room, even if they are wearing safety footwear.

5

HYDRAULIC OPERATION

On request, ergonomic mini levers are available, control levers mounted on the hood are offered as standard. The pedals have an automotive layout, permitting intuitive operation by the driver. Up to 5 additional functions are offered to adapt the truck to the respective application by means of attachments.

6

POWERFUL INDUSTRIAL ENGINES

Diesel or LPG engines guarantee powerful acceleration and reliable operation. The fully automatic three-speed transmission (“Power Shift”) fitted as standard ensures immediate and jolt-free shifting and safe manoeuvring. Vibrations and noises are reduced to a minimum due to the disengagement of engine, transmission and drive axle.

7

LARGE COLOUR DISPLAY

The large colour display with access to maintenance and service settings provides information about all the important driving parameters. The temperature of the engines and transmission is monitored and the engine is switched off if necessary.

8

REAR-VIEW CAMERA OR 360° CAMERA SYSTEM

For working in the smallest of spaces and in critical areas in the warehouse, a rear-view camera or 360° camera system, the CLARK SafeView@360, are optionally available.

FORKLIFT TRUCK WITH DIESEL OR LPG DRIVE **C60-80D900 / C60-75L**

Air conditioning system: optionally available for all diesel vehicles.

FROM WEATHER PROTECTION TO COMPLETE CAB WITH AIR CONDITIONING

Individual options ensure that adaptation to the respective application is possible. The C60-80 series can be equipped with non-marking tyres, for example, acoustic reversing alarm, fork adjustment or integrated and projecting side loaders.

The cab can be extended by weather protection in the form of a roof and front window or fully equipped complete cabs. The two-piece driver's doors can be opened by 180° and fixed to the chassis so that the truck can be driven with the door open.

The standard heated rear window as well as the easily accessible storage compartments and an MP3 radio round off the attractive driver's workplace.

ERGONOMICS AND CAB

The tiltable steering column and comfortable seat can both be adjusted individually. Various driver's seats, seatbelt monitor and an orange safety belt are available to choose from. An optional reversing grab handle with horn improves the rear view and goes easy on the driver's neck and shoulders.

PERFECT ALL-ROUND VIEW EVEN WITH TRIPLEX MASTS

The models in the C60-80 series stand out on account of their comparably slim lifting upright rails. In addition, the driver cab has large viewing windows to all sides. This gives drivers an excellent all-round view and unrestricted view of the load and fork carriers. This is possible thanks to the sophisticated arrangement of the chains and hoses on the upright rails. Clark uses double primary cylinders to ensure a good field of vision even when triplex masts are used.

LOW-MAINTENANCE WET DISC BRAKES

Maintenance-free, wet disc brakes are installed as the standard service brake as well as an independent drum brake as the parking brake. This ensures gentle and smooth braking. Low brake wear guarantees a long service life and has a positive effect on operating costs.

SAVE COSTS – THROUGHOUT THE VEHICLE LIFETIME

Long maintenance intervals lead to short downtimes and low spare parts costs. The C60-80 offers maximum service friendliness. Maintenance-related components can be reached quickly and easily by the service technician. The sturdy CLARK upright rails have a long service life. A full-flow return flow filter system filters the hydraulic oil every time it is returned to the tank. Coarse particles are filtered directly via a suction filter and do not even get into the oil circuit. This guarantees the durability of all hydraulic components.

FORKLIFT TRUCK WITH DIESEL OR LPG DRIVE **C60-80D900 / C60-75L**

“POWER SHIFT” AUTOMATIC TRANSMISSION

Simple operation is made possible by a fully automatic 3-speed transmission for diesel and LPG engines. The electronically controlled automatic gear shift makes comfortable and precise driving possible. No further settings are necessary to guarantee precise work, even during the most difficult of applications. The inch pedal with integrated brake function makes controlled driving and simultaneous fast lifting of loads possible.

GOOD PRICE- PERFORMANCE RATIO

The CLARK C60-80 series is equipped with as much sound technology as is necessary for heavy-moving, ergonomic and safe use. Thanks to the selection of sound components and long years of experience in the construction of high-quality industrial trucks, a series with an excellent price-performance ratio has been created.

A HIGH DEGREE OF SAFETY

The C60-80 has numerous safety functions:

- Temperature monitoring
- Additional lighting
- Blue LED headlight spot
- Seatbelt monitor and orange safety belt
- Transmission disengages when the parking brake is engaged
- Seat contact switch (Operator Presence System (OPS))
- CLARK Vertical Mast System (VMS) for vertical mast setting at the push of a button
- CLARK SafeView@360 or rear-view camera
- Safety switch for attachments

ALWAYS MOVING SAFELY WITH CLARK SAFEVIEW@360

The CLARK SafeView@360 is a 360° camera system that is made up of four digital cameras which give the driver a complete 360-degree view. Thanks to CLARK SafeView@360, drivers always have a great view of their surroundings. In addition, the use of digital cameras allows the images from the four individual cameras to be formed into a joint image in real time, enabling drivers to see the truck from the bird's eye perspective. Especially the fork tips and the counterweight at the rear are precisely integrated into the seamless image. Thanks to this perfect, all-round visibility, drivers can navigate safely and quickly even in tight, unclear situations.

Technical data for:

C60-80D900 / C60-75L

Load-bearing capacity:
max. 8,000 kg
at 600 mm or 900 mm

Lifting height:
max. 7,800 mm at 600 mm
or 7,315 mm with 900 mm

Driving speed:
max. 31.4 km/h at 600 mm
max. 29.4 km/h at 900 mm

Drive engine output:
LPG: 58.7 kW
Diesel: 55.4 kW

Aisle width:
from 5,250 mm at 600 mm
from 6,138 mm at 900 mm

THE C80D900

25 percent more residual load-bearing capacity with load centre at 900 mm

In order to increase the load-bearing capacity of the C80D900, relevant vehicle areas have been constructed even more solidly. Thus the C80D900 has a residual load-bearing capacity that is 25 percent higher at 900 mm load centre (without attachment) compared with the C80D with 600 mm load centre.

Upright rails and fork carrier

- Reinforced upright structure
- Increased overlap of upright rails
- Enlarged load protection grille

Counterweight

- 500 kg heavier

Drive axle

- Additional reinforcements
- Vehicle widened by 110 mm

Chassis

- Additional reinforcements in the chassis
- Even wider foot step

The load-bearing capacity of the C80D900 has been increased by 25% by reinforcing the frame, making the counterweight heavier and adapting the drive axle and the upright rails. Ideal for demanding applications, such as in the construction industry, construction material yards, woodworking, metalworking industry, paper and beverages industry as well as at forwarding agents and logistics companies.

GLOBAL PRESENCE

CLARK products are
in operation all around
the world.

RELIABLE SPARE PARTS SERVICE

Over 120,000 items in our
Duisburg Spare Parts
Centre in Germany.

COMPREHENSIVE DEALER NETWORK

Over 550 sales & distribution partners in
more than 90 countries ensure a high level
of availability of our products and services.

EXCELLENT QUALITY

CLARK is the forerunner in high-
quality standards and innovative
product developments.
